Question 1 | Correct Mark 1.00 out of 1.00**Problem Statement:**

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

Output Format

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

Answer: (penalty regime: 0 %)

```

1  #include <stdio.h>
2
3  int main() {
4      int a, b;
5      if (scanf("%d", &a) != 1) return 0;
6
7      int c[a];
8      for (int d = 0; d < a; d++) {
9          scanf("%d", &c[d]);
10     }
11     scanf("%d", &b);
12
13     int e = 0, f = a - 1, g = 0;
14     while (e < f) {
15         int h = c[e] + c[f];
16         if (h == b) {
17             printf("%d\n%d\n", c[e], c[f]);
18             g = 1;
19             break;
20         } else if (h < b) {
21             e++;
22         } else {
23             f--;
24         }
25     }
26
27     if (!g) {
28         printf("No\n");
29     }
30
31     return 0;
32 }
```
