Grade	10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("*");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                printf("*");
                printf("*");
                break;
            }
        }
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
1  #include<stdio.h>
2  int main()
3  {
4      int n,count=0;
5      scanf("%d",&n);
6      count++;
7      if(n==1)
8      {
9          count++;
10     }
11     else
12     {
13         for(int i=1; i<=n; i++)
14         {
15             count++;
16             for(int j=1; j<=n; j++)
17             {
18                 count++;
19                 count++;
20                 count++;
21                 count++;
22                 break;
23             }
24         }
25         count++;
26     }
27     printf("%d",count);
28 }
```

	Input	Expected	Got	
✓	2	12	12	✓
