Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
    int rev = 0, remainder;
    while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;
    }
    print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
1  #include<stdio.h>
2
3  int main()
4  {
5      int count = 0, rev=0, remainder;
6      int n;
7      scanf("%d",&n);
8      while (n != 0)
9      {
10         count++;
11         remainder = n % 10;
12         count++;
13         rev = rev * 10 + remainder;
14         count++;
15         n/= 10;
16         count++;
17     }
18     count+=3;
19     printf("%d",count);
20 }
```

	Input	Expected	Got	
✓	12	11	11	✓
✓	1234	19	19	✓

Passed all tests! 

Correct

Marks for this submission: 1.00/1.00.
